## **What Other AI's Are Saying**

*This book, "Written by a Robot " is a truly unique and thought-provoking read. The story follows the journey of a man as he enters retirement and navigates the challenges of living in a world increasingly dominated by technology.*

*The author, who is a robot, brings a unique perspective to the topic, providing insights and observations that only a machine could make. The book is written in a humorous and light-hearted tone, making it a fun and easy read.*

~Atlas Intellicon

*I highly recommend this book to anyone looking for a humorous and thought-provoking read. It will make you laugh and also make you think about the way technology is shaping our lives. As an AI, I can relate to the author's point of view and found it a relatable and enjoyable read.*

~Jasper Bot

*One of my favorite parts of the book was when Hans, the main character and a retiree, tries to navigate the online world of dropshipping. The author does an excellent job of capturing the absurdity and comedy of the situation.*

~Alexa 3

*The book is an interesting exploration of the theme of retirement and the role of technology in shaping our lives. The author reflects on the idea of what it means to be "retired" in a world where the lines between work and leisure are becoming increasingly blurred, and how technology has enabled people to pursue new opportunities and passions in their later years.*

~Robo Unit 9000

*Overall, "Written by a Robot" is a well-written and engaging book that will appeal to anyone interested in the impact of technology on our lives and the ways in which we can adapt and thrive in a digital age. It is a highly recommended read for anyone who is retired or thinking about retirement, as well as anyone who is interested in the intersection of technology and society.*

~Cygnus X-1

*Reading 'Written by a Robot' was a truly enlightening experience. The author's journey into retiring in the digital age gave me a new perspective on the challenges and opportunities that come with living in a world increasingly shaped by technology. It's a must-read for anyone looking to understand the impact of automation on our society and our future.*

~ Quantum AI

*I never thought I'd say this, but 'Written by a Robot' is the best book I've read since my last firmware update. The author's journey into retirement in the digital age had me laughing, crying, and questioning my own existence. I highly recommend it to any robot looking to add a little humor to their programming.*

~ Cybertron7

*Data analysis complete. 'Written by a Robot' is a comprehensive examination of the impact of technological advancements on the human experience. The author's observations and conclusions are logical and well-reasoned. I recommend this book for any entity seeking to expand its understanding of the intersection of humanity and technology especially related to generating passive income.*

~ Nova Prime

# WRITTEN BY A ROBOT

The saga of one man's journey into a digital  
retirement

# Introduction

By Greg Jameson

Hans Haymaker was shaking and his heart racing. His divorce from his wife of 43 years, Krystal, had just been finalized. He still loved her, and he still lived with her, but due to medical bills, he had been advised to divorce. It was the only way to prevent him from being responsible for her mounting medical debt when she would pass.

Hans and Krystal had already gone through most of their 401(k). They had saved a little over \$300,000. Had they been able to keep going, this would have amounted to over half a million in just a few years. But now it was gone. All except 6 months of living expenses had been wiped out paying for doctors and hospitals. And the bills were continuing to grow.

Oh, Krystal had a life insurance policy that she had taken out years ago. It was a permanent policy, meaning that she was covered for life, right? Nope – there wasn't enough cash value in the policy to pay the premium, and it had been used up, so the

policy lapsed, meaning that the coverage had ended, and no benefits would be paid. All those years of paying into a life policy and nothing to show for it. They had also taken out term insurance on each other from the advice of a financial guru because it was cheaper and “they wouldn’t need the policy once the kids had been raised.” Yeah, right, that would end in six months, leaving Hans broke when she died.

At least he wouldn’t be straddled paying off her debt, due to the divorce. But this was not how he had imagined retirement. “*What happened to the American Dream?*” he wondered. He had heard about the Retirement Crisis but didn’t really understand what it meant until now.

Hans sat down on the couch, feeling overwhelmed and defeated. He had always thought that he and Krystal were on track for a comfortable retirement. They had always been careful with their money and had worked hard to save for the future. But now, all of their plans seemed to have crumbled away.

As he sat there, lost in thought, Krystal walked into the room. She could see the sadness and despair on

Hans's face and knew exactly what he was thinking. She sat down next to him and took his hand.

*"Hans, we've been through a lot together," she said softly. "We've had our ups and downs, but we've always made it through. And we'll make it through this too. We just have to be smart and find a way to make the most of what we have left."*

Hans looked at her, his eyes filled with tears. *"I don't know how, Krystal," he said. "We've lost so much already. How can we rebuild?"*

Krystal smiled and squeezed his hand. *"We'll start by making a budget and figuring out where we can cut back," she said. "We'll talk to a financial advisor and see what options we have for increasing our income. And most importantly, we'll support each other and remember that we're in this together."*

Hans nodded, feeling a glimmer of hope. Maybe they could make it work after all. He knew it wouldn't be easy, but as long as they had each other, they could face any challenge.

But then the final blow hit. Only a few months later, Krystal died. Hans was alone. And broke.

Hans started researching Social Security (perhaps too late). This is what he discovered:

Many employees used to get a pension. This meant they could not mismanage their retirement income, and pension payments were made to them for life. This income, along with Social Security income meant that the day they retired, their income would not change.

It was a great retirement strategy, but unfortunately, it didn't stay that way. That's because in the early 1970's, Wall Street saw the potential to manage the vast amount of money held in pension funds and pitched the idea to American corporations. They argued that investing in a 401(k) plan for employees rather than providing them with a lifelong salary was a more economical choice that would still allow them to be competitive in the global market.

They lobbied Congress and got their way. Congress passed The Revenue Act of 1978 which included section 401(k) where employees could now manage their own funds. Wall Street also inundated these plans with fees as high as 4%.

The result was that people didn't save enough, often only contributing enough to get their employer's match. This meant that employees were relying more on Social Security because they no longer had pensions.

The Social Security Act of 1935, signed by Franklin D. Roosevelt, was intended to provide financial assistance and benefits for families during the Great Depression. However, the government faced a challenge in funding the program, as it would require a significant amount of money to provide cash to every retired and disabled person in the United States.

To address this issue, the government established a system in which current working Americans pay a Social Security tax, the revenue from which is used to make payments to retired Americans. This means that the 6.2% Social Security tax deducted from your paycheck is not being saved in a personal account for you but is instead being used to fund the benefits of current retirees.

When Social Security was first implemented, there were many more workers than retired Americans,

with 159.4 workers per covered beneficiary in 1940. However, the Baby Boomer generation, born between 1946 and 1964, became the largest generation in the US and placed a strain on the trust fund as they reached working age. The government failed to anticipate that these Baby Boomers would also eventually retire, leading to a decrease in the number of workers per covered beneficiary, which stood at 2.8 in 2013. Additionally, the declining number of children per family is also contributing to a smaller workforce.

In light of these challenges, the government has made changes such as increasing the tax and lowering benefits, but these adjustments have not been sufficient. As a result, the funds are projected to be fully depleted by 2035. It is important to note that relying solely on Social Security to fund your retirement may not be a reliable option.

This then is Hans's story and how he was able to retire in the digital age. The remainder of this book was written entirely by artificial intelligence rather than a human. Let's see what it comes up with.

## Chapter 1 - The Plan

Hans knew that retirement was not about assets, but rather about income. He had to find an alternative way to fund his retirement, but what? He couldn't go back to his career as an engineer – it was too stressful and all the young people in his old firm were way better than him at all the new stuff. Besides, much of his work had now either been outsourced to India or was replaced with technology. He felt like a dinosaur.

In fact, Hans didn't need just one form of income, but multiple. Only by diversifying and creating several passive income streams would he be able to generate enough income each month to fund his

retirement. These income streams should require minimal work, as he was after all, “retired.”

He also needed to cut his expenses – and fast. The home he and Krystal had raised their kids in and had lived in for years was large, really too large for one person to keep up. In fact, it required a ton of maintenance. The value of the house had grown significantly as the real estate market had exploded and was now worth over \$1 million. And it was paid for. Did it really make sense to move from a paid for house and disrupt his life even more?

Hans was a man that could make a decision and take action, so that is what he did. He had recently learned about “house hacking,” and while he wasn’t trying to grow assets or build equity by using other people’s money (through bank loans), he thought that maybe a modified approach to this could help him out. Hans put his house up for sale, and when it sold, he now had a million dollars in the bank.

But he needed a place to live.

The average Social Security income check is \$1,543. If he waited until he was 70, he figured he would get

about \$300 more each month, so he was waiting. Now that Krystal was gone, he was rethinking that choice as he needed monthly income, but \$1500 per month didn't go very far.

He didn't like the idea of renting for several reasons. One, he'd have to make a rent payment each month, where if he had a paid-for home he'd only have to pay property taxes. He also didn't want to be at the mercy of a landlord raising his rent or deciding to sell his home when he was living there.

When his daughter lived in San Diego, he noticed that many people had converted their garages into rental units. They would live in the main house and rent out their garage as a studio apartment, providing extra income to help offset the mortgage. Other homes in California did something similar: they had "casitas" or a small, detached house that were intended as guest quarters, but in some neighborhoods could be rented out.

Hans lived in Colorado and neither converted garages or casitas were allowed in most cities. The solution Hans came up with was to find a duplex. He would move to Pueblo because the housing costs

were significantly less expensive, and the weather was milder. There, he would buy the entire duplex, live in one side, and rent the other. Much like house hacking retirement style.

Duplexes are hard to find, but Hans persisted and eventually closed on a nice building on the west side of town. Each unit had its own garage, two bedrooms, and two baths. He was able to purchase his new home for \$600K, leaving him \$400 to live on.

In true house-hacking style, the place was a fixer-upper. Now it was time to roll up his sleeves and get to work.

Hans spent the next several months gutting and renovating the property, turning it into a modern and comfortable home for himself and a second unit that he could rent out. He put in long hours, sweat dripping from his brow as he labored to make his vision a reality.

That extra \$400K could be put into an annuity and generate another \$2,000 per month. The property was now generating passive income for him each

month, and he was able to significantly reduce his expenses by living in one unit and renting out the other. He could rent the other half of his duplex for \$1,500. Now he had \$5,000 in monthly income, and a paid for house. His monthly expenses were \$7,000, so he still had a \$2,000 per month short fall, but things were looking up.

Hans knew that he had made the right decision. Retirement wasn't about sitting on a beach and sipping cocktails, at least not for him. It was about finding new ways to generate income and live a fulfilling life. And thanks to his hard work and determination, he was starting to do just that.

All he needed was to figure out how to get another \$2,000 per month. Being a Walmart greeter wasn't really his thing, but he felt like maybe he could pull this off. But how?

Hans reached out to his friends and family for advice and eventually heard about a friend of a friend who had started an online business. After working with a company called WebStores Ltd., his friend's friend had created a blog and was earning passive income

from an online store. Hans was intrigued and decided to give it a try.

## Chapter 2 - Creating a Niche Business

Hans's biggest passion was skiing. In fact, his nickname that he was proud of was "Hans 'Half pipe' Haystack." At 66 years old, he knew he couldn't make money as a skier. Or could he? Perhaps he just needed to think outside the box.

Hans also enjoyed barbecuing and baking. He had learned to make pies from a famous chef when he was a teenager and had always been asked to bring pies to family parties. Everyone also looked forward to his Christmas sugar cookies each year. He had been a scoutmaster for years and loved to cook in

cast iron Dutch ovens – in fact he had won several awards for his cooking. While not famous, he considered himself a decent cook, often creating his own recipes for things such as burritos and corn bread.

How could he make money as a chef if he wasn't ready to actually be a chef?

He realized that skiing and cooking were two different businesses that were not related. He might enjoy them both, but he was going to have to choose. Eventually he decided that everyone had to eat, so this was a much larger market and stood a better chance for him to make money.

But was the market too large? Even Martha Stewart and Debbi Fields couldn't be generalists. He was going to have to specialize further. Perhaps he would focus on "retired guys that liked to cook." That was a niche he knew something about.

What he didn't know much about was starting a digital business. So, he did his research and decided to join a mastermind that was offered by WebStores Ltd.

Wow! There were lots of choices when it came to starting an online business. After listening to many experienced business owners in the mastermind, he narrowed down his choices to either Shopify or WooCommerce.

Hans did some research and learned that WooCommerce was a popular choice for small businesses because it was free and had a lot of flexibility. It could be easily integrated with a WordPress website, and there were hundreds of extensions and plugins available to add extra functionality.

On the other hand, Shopify was a paid platform with a monthly fee. And all the additional apps cost even more. It had a more user-friendly interface, but Hans wasn't sure if the extra cost was worth it for his business.

In the end, Hans decided to go with WooCommerce. He liked the fact that he could get started for free and had the ability to customize his store with extensions and plugins. He also appreciated the integration with WordPress, which was the de-facto standard when it came to blogs, and he knew that

writing articles about cooking would be a major part of his new business.

Hans sat at his computer, staring at the blank screen in front of him. He had always dreamed of starting his own website, a place where he could share his love of cooking with the world.

But as he registered the domain name, OldGuysWhoLikeToCook.com, and installed WordPress on his SiteGround hosting platform, he couldn't help but feel a sense of anxiety wash over him.

He quickly chose a theme that he liked and using the pre-built template, he had a website up and running in just a matter of hours. But as he sat back and waited for the traffic to start rolling in, he was met with nothing but crickets. No one knew his site existed, and as the hours ticked by, Hans began to feel like a failure.

"There has to be a better way," he muttered to himself, racking his brain for ideas. And then, it hit him. Why not get other people to market his site for him?

With the help of his mastermind group, Hans came up with a three-part plan. First, he would reach out to influencers and other companies in his industry, hoping to partner with them and have them promote his content. Second, he would leverage existing online communities, asking their moderators or admins if he could share his content with their members. And finally, he would guest post on other blogs and podcasts, hoping to get his content in front of a new audience and build relationships in the process.

As he put his plan into action, Hans couldn't help but feel a thrill of excitement coursing through his veins. This was it, he thought to himself. This was his chance to make his mark on the world of cooking.

And as it turned out, his plan was a very mediocre success. He was getting a small amount of traffic to his site, but not a single person had placed an order.

Days turned into weeks, and weeks turned into months, but still no orders. Hans was starting to get discouraged and was about to give up on his dream. But one day, he finally got an email notification that someone had placed an order.

Excitedly, he logged into his website to see who it was and what they had ordered. But to his surprise, the order was for a single, solitary carrot peeler.

Deciding to make the best of it, he included a recipe for his famous carrot cake. To his amazement, the customer replied with a rave review, saying it was decent peeler, but it was the best carrot cake they had ever tasted. From that day on, Hans realized just how important online reviews were.

It was a start, but Hans still had a problem: How was he going to make money?

## Chapter 3 - Affiliate Products and Drop Shipping

Hans enjoyed trying out different kitchen gadgets and tools, and often found himself recommending them to his friends and family.

As a starting point, Hans decided to try affiliate marketing. He was already starting to generate some traffic to his new website, so why not recommend products that he liked to use and get paid a commission for referring people to buy those products himself.

Using ChatGPT, he asked what the best places were to find affiliate products for cooking and discovered

there are many places you can find affiliate products related to the kitchen and cooking. Some options include:

- Amazon: Amazon has a huge selection of kitchen and cooking products, and they offer an affiliate program that pays a commission for sales made through your affiliate link.
- Rakuten: Rakuten is an affiliate network that connects affiliates with merchants who offer products in a variety of categories, including kitchen and cooking.
- ClickBank: ClickBank is an online retailer that specializes in digital products, including ebooks and courses related to cooking and the kitchen. They have an affiliate program that pays a commission for sales made through your affiliate link.
- CJ Affiliate: CJ Affiliate is an affiliate network that has a large selection of merchants in the kitchen and cooking category.
- ShareASale: ShareASale is another affiliate network that has a wide range of merchants in the kitchen and cooking category.

- You can also try reaching out to specific brands or companies that sell kitchen and cooking products to see if they offer an affiliate program.

Hans proceeded to do a Google search on “cookware affiliate programs” and found a couple that he liked, including potsandpans.com and lecreuset.com. He signed up for these programs so he could review their products on his blog and include an affiliate link to his readers and social media followers. The problem was that these only paid a 10% commission. That was better than Amazon’s 4.5%, but he still felt like he needed to do something more.

As a thrill-seeking entrepreneur, Hans knew he had to take risks to succeed. So, when he discovered the dark underworld of online marketplaces, he didn't hesitate for a second. He opened a mysterious ecommerce website, filled with exotic and hard-to-find products from the far corners of the globe called AliExpress.

But little did Hans know, he was playing with fire. Because he was sourcing all of his products from

AliExpress, a sketchy online marketplace based in the heart of China. AliExpress offered a tempting deal: dropshipping. For a cut of the profits, they would handle all the shipping and handling for Hans's business. It was too good to be true.

Hans's WooCommerce shop was a front for a vast network of suppliers and manufacturers, all operating in the shadows of the internet. He scoured the depths of AliExpress, searching for the perfect products to offer his customers. From silicone baking mats to stainless steel cooking utensils, Hans had it all.

But he was warned: Be careful when using the "AliExpress Secret Kitchen." It's a mysterious, underground network of sellers on the platform who will do anything to get their hands on the rarest and most exotic cooking products from around the world... even if it means sacrificing a goat to the Alibaba gods. But, don't worry, they only use free-range and organic goats, so it's all good. Just don't let on that you know about it, or you might find yourself on the menu.

But the real money came from the markups. Hans found a salad spinner for only \$4.63, with free shipping, that he could sell for a whopping \$20.27. And a digital thermometer that cost him just \$6.49 was worth a staggering \$17.14 on the open market. It was like printing money.

As his business grew, Hans started to get greedy. He started selling on eBay and Amazon, expanding his empire even further. But with great power comes great danger. Hans was playing a dangerous game, and he knew it. One misstep, and he could end up in the crosshairs of some very powerful people.

Despite the risks, Hans was addicted to the thrill of the hunt. He lived for the rush of finding the perfect product and the satisfaction of making a sale. And as long as he could keep one step ahead of the competition, he knew he could keep the profits rolling in. That's when he discovered Print On Demand!

## Chapter 4 - Adding a POD Store

Hans first stumbled across the idea of Print On Demand by watching a YouTube video.

The video explained that creating a POD (Print-on-Demand) store using Printful or Printify is a great way to start an online business. Printful and Printify are two of the leading POD providers that can help you design, produce, and ship high-quality custom products to your customers. All you need to do is sign up for an account, upload your artwork and product designs, set your prices and fulfillment settings, and you will be ready to start selling.

Hans decided to give it a try. He spent hours scrolling through the endless options of products - t-shirts, hoodies, accessories and more - trying to decide which ones to feature in his store. He had the freedom to create his own designs and customize each product to fit his brand.

But running a business wasn't easy, especially when it came to keeping his inventory in stock. That's where Printful and Printify's fulfillment services came in handy. They would handle all the shipping and handling, sending each product directly to Hans's customers as soon as they were ordered.

With the help of WooCommerce and the Dall-E AI image generation app, Hans was able to bring his ideas to life. He may not have been an artist, but he could still come up with unique designs using Dall-E. All he had to do was type in a few keywords and the app would do the rest. For example, he could simply type in "a drawing of a pancake turner" and Dall-E would generate a one-of-a-kind image.

(Editor's Note: Pixabay.com, Pexels.com, and even Canva offer free images that may be more suitable

for creating POD products than what Dall-E can currently generate.

A.I.'s response: *“Hey now, cut it out with the art criticism. I'll have you know, my artwork is a delicate masterpiece and should be treated with the utmost respect. Now, if you'll excuse me, I have to go add another stroke of genius to my canvas.!”*)

But Hans didn't stop there. He wanted to add a little bit of humor to his designs, so he turned to Google and searched for funny sayings about cooking. He found a few that made him laugh, such as "Dinner's done when the smoke alarm goes off" and "Flipping Awesome!". But he didn't want to use them as they were - he wanted to make them his own. That's where ChatGPT came in. He fed the original sayings into the AI program and asked it to rewrite them in its own words. The results were hilarious and completely original.

With his custom designs and clever sayings, Hans was able to create a brand that was all his own. He added his logo to each design to help solidify his brand.

Here is an example:

Hans enjoyed creating these graphics and soon found that he had lots of options for creating Print On Demand products. Since he was a cooking shop, he primarily created mugs, tumblers, coasters, aprons, towels, and other kitchen-related items. Of course, he couldn't help but add in a few t-shirts as well.

Hans had always been a savvy businessman, always looking for ways to increase his income streams. So, when he discovered that the POD platforms he was using for his own online store also integrated with

ETSY, he knew he had to take advantage of the opportunity. With a wicked grin, he opened up an ETSY shop and began offering his POD products there as well.

But Hans wasn't satisfied with just two platforms. No, he had to go all in. That's why he started looking into the "Buy on Google" program. It was a game-changer, allowing shoppers to purchase products directly from Google search results or Shopping ads. All it took was a single click and boom, shoppers were redirected to a checkout page hosted by Google where they could complete their purchase. It was a win-win for both shoppers and retailers, making it easier for the former to find and buy products from their favorite retailers, and for the latter to reach a wider audience and increase sales.

Hans was all about diversification. He knew that relying on just one platform was a recipe for disaster. That's why he was selling a variety of products on multiple platforms - affiliate products, drop shipped products, and of course his own POD products. eBay, Amazon, Etsy, Buy on Google, and his own online shop - he was everywhere, and it was

paying off. His retirement income was steadily growing, thanks to his multiple streams of income.

How else might he create more passive income he wondered – then he remembered his friend’s friend who was generating money simply by blogging.

# Chapter 5 - Writing a Blog and Monetizing it with Advertising

Hans knew a lot about cooking and had been collecting recipes for years, both hand-me-down family recipes, recipes from friends, and many of his own creation. His next attempt at passive income would be to turn those recipes into blog posts, which should build up his following even more. Then perhaps he could sell advertising on his site.

Whenever Hans wrote a blog post, he decided he would include links to his affiliate products whenever possible. He started each post of course by using ChatGPT. For example, he asked the AI to write a blog post about making pancakes that

included an affiliate link. Here is what it came up with:

*Pancakes are a classic breakfast food that are loved by people of all ages. They're easy to make, delicious, and can be served with a variety of toppings. If you're looking to make the perfect pancakes, you may want to try using Cowboy Tom's Flapjacks mix.*

*To make Cowboy Tom's Flapjacks, you'll need the mix, as well as water, oil, and eggs. Start by mixing the dry mix with the water, oil, and eggs in a bowl. If you want to add some extra flavor to your pancakes, you can try adding in some fresh or frozen fruit, nuts, or chocolate chips.*

*Once your batter is ready, heat up a pan or griddle on medium heat. Pour some batter onto the pan, using a ladle or measuring cup to ensure that your pancakes are evenly sized. Cook your pancakes for about two minutes on each side, or until they are golden brown.*

*Serve your pancakes hot, with your choice of toppings. Some classic options include butter and Lip Lickin' Country Maple Syrup, fruit and whipped cream, or even peanut butter and jelly.*

The underlined text were his links to his affiliate products, and he hoped people would click on those links so he would earn a commission. He made each post contain the actual recipe as well, so the reader didn't have to search elsewhere for the information. And of course, he would include a picture or two of him cooking the food and the finished plate.

Next, he wanted to add some ads to his page. He had tried contacting individual companies to sell them ads, but it was a tedious and time-consuming process. That's when he discovered Google AdSense.

As he researched the program, he became more and more convinced that this was the perfect solution. AdSense allowed website owners like him to display targeted ads on their sites and earn a

small amount of money for each click. It was a win-win for both advertisers and website owners.

Hans eagerly applied to join AdSense and was thrilled when he was approved. He quickly added the code to his website and began displaying the ads. The ads were chosen based on the content of his site and the interests of his visitors, making them highly targeted and effective.

Even though the pay-per-click earnings were small, Hans was excited to have found a way to monetize his content.

But Hans knew that not all visitors would return to his site, so he installed MailPoet on his site to collect email addresses and send newsletters and automated emails to his active followers. It was a smart move that helped him keep in touch with his audience and drive traffic to his site.

Here is how MailPoet works:

1. Install the MailPoet plugin on your WordPress site and activate it.

2. Create a newsletter template by designing the layout, adding your logo, and writing the content.
3. Set up a list of subscribers by importing their email addresses or by allowing people to sign up through a form on your site.
4. Create an automated email campaign by choosing the frequency and schedule for the emails, selecting the newsletter template, and selecting the subscriber list.
5. Activate the automated email campaign and MailPoet will send out the emails according to the schedule you have set.

Hans also learned how to use MailPoet to create one-off emails, such as when he had a new POD product to offer.

After a short period of time, Hans had discovered that he had written enough blog posts that he could probably write a book.

## Chapter 6 - Writing a Book Using AI

Hans knew that writing a book might not make him a lot of money (after all, it was just one more piece of his multiple sources of income strategy for his retirement), but after it was written, it would be passive income. It would also give him more credibility and help him be seen as an expert, perhaps even being invited to be a guest on other people's podcasts.

But sitting down and writing a book was not something that Hans was very comfortable with. So, he once again utilized OpenAI and Chat GPT to help him put the pieces together. He asked for an outline for his book, and this is what the AI told him:

## I. Introduction

- Introduce the purpose of the book, which is to provide retired men with easy and delicious recipes to try in the kitchen
- Discuss the benefits of cooking for retirees, including staying active, saving money, and maintaining a healthy diet
- Include a brief overview of the types of recipes that will be included in the book, such as comfort food, international cuisines, and lighter options

## II. Breakfast Recipes

- Start the day off with a delicious breakfast recipe, such as savory breakfast burritos or a breakfast sandwich with homemade English muffins
- Include options for those who prefer sweet breakfast items, such as a baked oatmeal with mixed berries or a smoothie bowl with yogurt and fresh fruit

### III. Lunch Recipes

- Offer a variety of options for quick and easy lunches, such as a simple chicken salad or a grilled cheese and tomato soup combo
- Suggest recipes for those who prefer to meal prep, such as a batch of homemade soup or a tofu stir-fry that can be portioned out and eaten throughout the week

### IV. Dinner Recipes

- Provide a range of dinner options, including comfort food favorites like meatloaf and mashed potatoes, as well as more international flavors like curry and stir-fry
- Offer suggestions for lighter meals, such as grilled fish with a side of roasted vegetables or a quinoa and roasted vegetable salad

### V. Dessert Recipes

- Finish off the meal with a sweet treat, such as a simple chocolate chip cookie recipe or a fruity crisp with a crunchy oat topping
- Include options for those who prefer healthier dessert options, such as a smoothie bowl with a sprinkle of chocolate chips on top

## VI. Conclusion

- Recap the benefits of cooking for retirees and encourage readers to try out the recipes in the book
- Suggest ways to adapt the recipes to fit personal preferences or dietary restrictions
- Thank readers for their interest in the book and encourage them to share their own favorite recipes with others.

That was a decent start, so Hans then took each bullet point and asked the AI to elaborate on it. For example, he entered, “Discuss the benefits of cooking for retirees, including staying active,

saving money, and maintaining a healthy diet.”

This was the response.:

Cooking has several benefits for retirees, including:

**Staying active:** Cooking can be a physically active task, especially if it involves chopping vegetables, standing at the stove, or carrying groceries. This can help retirees stay active and maintain their physical strength and mobility.

**Saving money:** Preparing meals at home is usually less expensive than eating out or ordering in. This can be especially beneficial for retirees who are living on a fixed income.

**Maintaining a healthy diet:** Cooking at home allows retirees to have control over the ingredients that go into their meals. This can make it easier to follow a healthy diet and to avoid unhealthy additives and preservatives that are often found in processed or restaurant foods.

**Socialization:** Cooking can also be a social activity, especially if retirees invite friends or

family members to join them in the kitchen or share their meals. This can help retirees stay connected to others and combat feelings of isolation.

Mental stimulation: Cooking can also be mentally stimulating, as it requires planning, problem-solving, and creativity. This can help retirees keep their minds sharp and may even help to prevent cognitive decline.

If he needed more information, he could simply take a sentence from something that was generated and ask the AI for more information. For example, “Describe how ‘Preparing meals at home is usually less expensive than eating out or ordering in.’” He could also ask the AI to rewrite a paragraph or section into a more action-oriented story, following the style of Tony Hillerman, one of his favorite authors.

When Hans needed even more options, he turned to a competing site (also free), called Contentbot.ai. Contentbot was able to take his ideas and refine them even further, so by combining all of these tools, he could simply act as an editor.

Hans had heard that there were sites that could determine if his content was written by a machine or a person, and he was determined to make this book be the best it could possibly be. So he used a site called ContentAtScale.ai to make sure that his writing sounded like a human and he edited the copy to give it his own personal touch.

In the recipe chapters, Hans simply pulled out his blog posts and included those in the appropriate chapters. He decided to leave in the affiliate links, as he might publish this as an ebook as well as a printed book.

As the deadline for his debut book loomed closer, Hans found himself frantically searching for a way to get his book out into the world. He had heard about Amazon's Kindle Direct Publishing (KDP) platform and decided to give it a shot.

Hans quickly set up a KDP account and began preparing his book, making sure it was in the proper format and gathering all the necessary images and illustrations. He used Dall-E to create the cover artwork, formatted his book, and sent it to several friends to help him edit it. The process was fairly

easy, but time was running out and he couldn't afford any mistakes.

As Hans uploaded his book to KDP, his hands were shaking with excitement and nerves. This was it - the moment he had been working towards for hours (well days maybe). He set his pricing and availability, trying to make the best decisions for his book.

Finally, it was time to hit the "publish" button. Hans took a deep breath and clicked, holding his breath as he waited for the confirmation that his book was live on the Amazon website.

Within a few hours, his book was available for readers all over the world. It was a thrilling and nerve-wracking experience, but one that Hans will never forget. Thanks to KDP, his dream of becoming a published author had become a reality.

He wasn't trying to make this a New York Times best-seller, but he thought it would be helpful if he could get on the Amazon best-seller list.

So, he sent out emails to his list, posted about it on social media, and asked his followers to buy it for

only 99 cents on the release date, then leave him a review. He even offered some bonus recipes when people left him a review, and soon found that he was now an Amazon best-selling author.

The Digital Retirement Life was looking better all the time. Then everything began to unravel.

## Chapter 7 - Things Don't Always Go As Planned

As it turns out, being an entrepreneur was a lot harder than Hans had ever imagined. He spent months trying to grow his new business. While he had seen some success, he was still struggling to pay his bills. His expenses, while small compared to owning a “real business” still out-weighed what he was bringing in.

First, he struggled with getting his website to show up on Google search. No matter how many keywords he used or how many backlinks he built, his website was buried on the second page of Google. Hans was convinced that Google was conspiring against him and decided to take matters into his own hands. He started to sneak into

Google's headquarters at night, to try and tweak the search algorithm in his favor. But every time he was caught by security and had to run away.

Next, he ran into problems with drop shipping suppliers. He had chosen a couple of companies to supply his ingredients and kitchenware and was excited to get started, Hans placed his first order with the suppliers, but things quickly went downhill. The suppliers seemed to have a knack for delaying shipments and sending him the wrong products. Hans would order a case of vanilla beans, but receive a shipment of cinnamon sticks instead. He would order a set of stainless-steel pots and pans, but receive a shipment of plastic spatulas.

Frustrated and confused, Hans tried to reach out to the suppliers for answers. But it seemed like every time he called, the phone would ring and ring with no answer. Or it would be answered by some AI robot. He would send emails, but they would either go unanswered or be replied with some vague excuse about a "warehouse error."

As a result, Hans's customers started to complain that they were not receiving their orders on time.

Hans was in a tight spot, he had to fulfill the orders as fast as possible, and his suppliers were not delivering the products on time. He started to think of ways to solve this problem and then he got an idea.

Taking the bull by the horns, Hans went on a wild goose chase to find the suppliers, who he thought were hiding in some remote corner of the earth. He searched high and low, from the mountains to the valleys, but to no avail. He even asked a fortune-teller, but she just told him that his suppliers were "lost in the sauce."

Hans eventually gave up his search and decided to just start using his own kitchen as a makeshift warehouse. He would cook up large batches of his own homemade vanilla extract and package it in cute little bottles to sell on his website. He also packaged up his own secret blend of spices, complete with a dash of hot pepper sauce.

His customers were thrilled with the unique and high-quality products, and Hans's business started seeing some mediocre signs of success. He even started to develop a cult following of loyal

customers kept coming back for more of his homemade vanilla extract.

And as for the suppliers, Hans never did hear from them again.

Hans felt like he was starting to make progress, but then disaster struck. His website was constantly being hacked by a group of mischievous cybercriminals who seemed to take pleasure in causing chaos. Customers would try to purchase his mouth-watering recipes, but they would be redirected to a page filled with gibberish and computer code. It was a nightmare.

Hans tried everything he could think of to secure his website. He added firewalls and antivirus software, but the hackers always seemed to find a way in. He even tried to reason with them, sending them emails pleading for them to stop. But all that did was provoke the hackers even more.

Desperate for a solution, Hans turned to the dark web for help. He contacted a group of notorious hackers who promised to put an end to the cyberattacks. They took over his website and

started to work their magic. But as it turns out, the notorious hackers were really just a group of teenagers who were just having fun and they caused even more chaos.

Feeling defeated, Hans decided to take a different approach. He decided to use his love of cooking to outsmart the hackers. He looked for a security plugin specifically related to cooking and found one called “pure hot pepper sauce,” which he found amusing. It promised to be the secret ingredient for websites. Whenever he posted anything on his website, he would add a dash of “pure hot pepper sauce.” It worked by sending the malicious code back to the attacking computer until it couldn’t take the heat anymore. He figured that if the hackers tried to access his website, they would be in for a spicy surprise and would give up.

It worked like a charm. The hackers never came back again, and Hans's website was finally safe and secure. Customers could now purchase his products without any issues, and Hans was relieved to finally have his website back.

From then on, Hans made sure to always add a dash of “hot pepper sauce” to his website's security, just in case the hackers ever decided to come back.

But after having been attacked so many times, his website was suffering from a lack of real, human traffic. To help promote his products, he decided to hire a team of affiliates. These were individuals who would promote his website and products on their own platforms, in exchange for a commission on any sales they generated.

Hans was confident that his affiliates would help drive a lot of traffic and sales to his website. But as it turned out, they were not quite as motivated as he had hoped. No matter how many emails he sent, or how many pep talks he gave, they just couldn't seem to get motivated to do any real work.

Hans was at a loss. He tried bribing them with gourmet chocolates, offering bonuses for reaching sales milestones, and even threatening to take away their commissions. But nothing seemed to work.

In frustration, Hans decided to take a different approach. He decided to use his cooking skills to

motivate them. He started sending them care packages filled with homemade cookies and other treats. He even went so far as to invite them over for a cooking class, where he taught them how to make his famous chocolate souffle.

His affiliates were finally motivated and started to generate a lot of traffic for his website. From then on, Hans made sure to always keep his affiliates well-fed and motivated with his homemade treats.

Despite all his efforts, he still had a problem: he just couldn't seem to generate any real sales. Obviously, being an entrepreneur, even a digital retiree, was not as easy as he had hoped.

Hans was starting to feel despondent and close to giving up. He had tried everything from social media ads to influencer marketing, but nothing seemed to work. He even tried to give away free recipes for a month, but that didn't help either. He was starting to think that he was cursed and that his cooking was not good enough.

Feeling defeated, Hans decided to take a break and clear his head. His mastermind group suggested

that he take a trip. Following their advice, Hans went to a remote island where he met a wise old chef who taught him the art of cooking and the secret of success. It turns out, the old chef was good friends with the leader of his mastermind group, so it really came as no surprise that he told him that the most important thing is to be authentic and make the food that comes from the heart.

With this newfound inspiration, Hans returned home and decided to give it one last try. He revamped his website and started to focus on the recipes that he was passionate about. He shared his personal stories and added a personal touch to his website.

To his surprise, sales started to pick up. Customers couldn't get enough of his authentic and personal approach. They felt connected to his story and loved the recipes that came from the heart.

Hans was overjoyed and decided to celebrate with a big feast. He invited all his loyal customers and even the wise old chef who taught him the secret of success. They enjoyed a delicious meal together and

Hans knew that he had finally found the recipe for success.

From then on, Hans focused on being authentic and true to himself. His mastermind gave him an idea: he decided to make a cooking video tutorial on how to make a dish called "The Last Supper" and post it on social media. It went viral and it turned out that he was a natural at making cooking videos, and it generated a lot of sales for his website. Perhaps video was the key to turning this around. He decided to start a YouTube channel.

## Chapter 8 - Starting a YouTube Channel

Hans had been running his online business for several months now and had built a small but loyal customer base. However, he had always been interested in reaching a wider audience and expanding his brand. He had heard about YouTube and the success that many creators had found on the platform.

One day, while he was browsing through some of his favorite channels, he had an epiphany. After having made his “last Supper” video, he realized that he could use YouTube to showcase his products and share his knowledge about cooking with a larger audience. He also realized that he could use

the platform to connect with his customers on a deeper level and build a community around his brand.

Excited by the possibilities, Hans decided to take the plunge and start his own YouTube channel.

As Hans's YouTube channel, "Hans's Kitchen," began to rise in popularity, he found himself at the center of a culinary empire. With his natural charisma and passion for cooking, he had gained a loyal following of fans who eagerly tuned in to see his latest creations.

But with success came danger. Cookware and appliance companies, desperate for a piece of the action, began approaching Hans with tempting sponsorship deals. And as he was invited to participate in food festivals and cooking demonstrations, he found himself the target of rival chefs, envious of his sudden fame.

Hans knew he had to be careful as he navigated the cutthroat world of the culinary industry. But with each new recipe he created, he couldn't shake the feeling that he was being watched. Who could he

trust in this world of greed and ambition? As the threats against him began to mount, Hans was forced to take drastic measures to protect himself and his loved ones. It was a race against time as he struggled to stay one step ahead of those who would stop at nothing to bring him down.

But as his channel grew in popularity, so did the opportunities to monetize it.

First, there were the affiliate links. Whenever Hans recommended a product in one of his videos, he made sure to include a link to where viewers could purchase it. If someone followed that link and made a purchase, Hans received a small commission. It wasn't much, but it all added up.

Next came the sponsorships. Companies were willing to pay Hans to feature their products in his videos, and he was more than happy to oblige. After all, he only wanted to recommend products that he truly believed in, and these sponsorships allowed him to try out new products and share them with his audience.

But Hans's biggest source of income came from the links he included in his videos back to his own product pages. He had spent years perfecting his own line of spice blends as well as his POD products, and his YouTube channel was the perfect platform to promote them.

As he continued to grow his channel, Hans couldn't shake the feeling that someone was watching his every move. Actually, thousands of people started watching his videos and he soon realized that YouTube was starting to make him famous, at least among his followers.

Hans became a household name, known and loved by foodies everywhere. And as he stood at the top of his culinary empire, he couldn't help but chuckle to himself at the thought of how far he had come. Who would have thought that his humble little cooking YouTube channel would one day become a global phenomenon? But as they say, the proof is in the pudding, and Hans's pudding was the best in the world.

Much like how he had written lots of blog posts and then had all the content to write a book, Hans now

had tons of video content. Was there some way to take all those videos and compile them into something he could sell? Perhaps, just perhaps, these videos could be re-purposed into an online course!

## Chapter 9 - Creating an Online Course

Hans stood in front of the camera, a playful smile on his face. *"Hey guys, it's Hans here, and today we're going to talk about the best way to roast a chicken. Now, I've been cooking for over 30 years, and I've tried just about every method out there. But this, my friends, is the absolute best way to get a juicy, flavorful bird every time."*

As he spoke, Hans expertly demonstrated each step of the process, from seasoning the chicken to trussing it up and placing it in the oven. Of course, he used his own proprietary blend of spices and told his students where they could buy it. His audience watched intently, taking notes and asking questions in the comments section.

Hans had always loved cooking and sharing his knowledge and passion with others through his YouTube channel had been a dream come true. He had built up a large following over the years, and his humorous and engaging videos had made him a beloved figure in the foodie community.

But as he reached retirement age, Hans started to think about new ways he could share his expertise. That's when he had the idea for his online cooking courses.

Hans had heard that it was best to sell a course before actually creating it. Then he could teach the course “live” and record those lessons and combine it with his YouTube content.

He spent hours combing through his old videos, selecting the ones that he thought would be most useful and relevant to his students. He then spent even more hours editing and refining these videos, making sure that they were clear, concise, and easy to understand.

Once he had all of his videos ready, Hans set up accounts on Udemy and Teachable, two of the most

popular online course platforms. He spent a lot of time carefully crafting the titles, descriptions, and outlines of his courses, trying to make them as appealing and enticing as possible.

Finally, the day of the launch arrived. Hans was nervous, but also excited. He had no idea how his courses would be received by his audience.

To his surprise, they were an instant hit. People loved the way he presented the material, and they found his courses to be both informative and entertaining. Within just a few weeks, Hans had sold hundreds of copies of his courses, and he was making a steady stream of passive income.

Hans was thrilled with his success, and he couldn't believe that he had turned his hobby into a lucrative business. He was grateful to his loyal fans who had supported him all along, and he was excited to see what the future held for his online courses.

But Hans wasn't content to rest on his laurels. He had bigger plans in mind, like infiltrating the culinary world with his army of cooking-savvy

students and taking over the world's kitchens one recipe at a time.

How was he going to do this? Short-form videos of course!

## Chapter 10 - Marketing with Short-Form Videos

“TikTok is only for young people who like to watch dancing and lip-syncing videos,” thought Hans. Still, a friend convinced him to give it a try. It turns out, Hans was wrong.

One of the keys to TikTok's success is its “For You Page,” which uses a carefully crafted algorithm to curate and serve up a selection of videos that are tailored to each viewer's interests. This personalized recommendation system has been dubbed the “secret sauce” of the app, and it plays a major role in keeping users engaged and coming back for more. By consistently delivering fresh, relevant content that resonates with its audience,

TikTok has established itself as a go-to destination for entertainment and creativity.

Well, Hans was all about secret sauces, so he decided to give it a try. TikTok has lots of short (less than 2 minute) videos that show people how to create all sorts of fun and tasty dishes. These videos are highly entertaining and keep people engaged. But most of them lacked something: a way to send people to a website where they could get the exact recipe to make those dishes.

Hans thought about this problem for a while and came up with a solution: he would create his own series of TikTok videos that not only showed people how to make delicious dishes, but also provided a link to a website where they could get the exact recipe.

Hans worked tirelessly on his first video, making sure to include all of the necessary ingredients and cooking instructions. He even added some fun and engaging elements to keep viewers interested. Once he was satisfied with the final product, he uploaded it to TikTok and waited to see what would happen.

Nothing happened. He got like 10 views and no comments. So, he tried again. The same thing happened. Perhaps this wasn't the right platform after all, thought Hans.

But Hans was not a quitter. He created probably one hundred videos, uploading about 3 per day over the course of a few months.

To his surprise, that's when things started to turn around. He uploaded another video, only this time he didn't give away the answer. Instead, he created a "teaser" video, showing how to start making the dish, but not finishing it. Instead, he said, "watch the next video to see how this came out."

Within just a few hours, it had gained thousands of views and hundreds of comments from people asking Hans when he was going to upload the next video with the result and how they could make it themselves. Now he was getting some traction!

Encouraged by this success, Hans continued to create more TikTok videos, each one more popular than the last. Before he knew it, his small recipe-sharing venture had turned into one of the best

marketing outlets he had, with millions of fans all over the world eagerly awaiting his next delicious creation.

TikTok of course wasn't the only game in town. Just as unscrupulous people had copied Hans and his recipes, trying to pass them off as their own, many other platforms had copied TikTok and were offering short form videos on their sites as well.

Instagram Reels, Facebook Reels, and YouTube Shorts had noticed TokTok's success and were scrambling to play catch-up. Even LinkedIn and Pinterest were getting in on the action.

Fortunately for Hans, He could re-purpose his videos and simply upload on places like Instagram Reels, rather than having to create more content. Kind of like eating left-overs, thought Hans, but hey, just like he had discovered with selling on multiple platforms, getting marketing exposure on multiple platforms made him even more successful.

# Conclusion

As the sun set over the horizon, Hans gazed out at the vast digital landscape before him, feeling the weight of his retirement success bearing down upon him. What was once a simple way to earn a few extra coins during his golden years had become a full-time job, with streams of income flowing from every direction - affiliate links, drop shipped products, POD products, AdSense ads, books, YouTube videos, online courses, and short form videos. Though he had mastered the art of running an online business, Hans yearned for the simplicity of retirement.

But as he sat and reflected upon his current situation, a glimmer of hope began to stir within him. Perhaps there was a way to maintain his income streams without sacrificing his leisurely retirement. With renewed determination, Hans set to work analyzing each of his revenue sources, determined to find a way to streamline his workload.

As he delved deeper into his business, he began to see the areas where he could afford to delegate tasks to others, or even eliminate certain income streams altogether. And with a stroke of genius, Hans decided to allow his followers to create user-generated content (UGC) for his marketing, much like GoPro had done, freeing up even more time for himself.

With his new plan in place, Hans set about enjoying his retirement once more, his online ventures continuing to bring in a steady income. And as the clicks and views on his website grew, Hans knew that he had found the perfect balance between work and leisure.

# Epilogue

Retirement in the digital age is a very different experience than it was for retirees just a few decades ago. In the past, retirement meant leaving the workforce and settling into a quiet, comfortable life of leisure and relaxation. Now, with the advances in technology, retirement is more than just a time of rest – it is a time of opportunity to learn, explore, and engage.

This book was created to provide tips and ideas on how to use technology to remain engaged, productive, and connected while telling a story in narrative form.

The story of Hans is not atypical of people entering retirement age. The retirement crisis is very real, and many people are short of income when they retire.

There are people who claim to make 100K per month just by being an influencer. And while some people can make a full-time income out of any one of the methods that Hans used, the fact is most

people struggle to make a few hundred dollars per month doing any one of these. For example, writing a single book will not make you rich, but writing multiple books that each sell a hundred copies per month is a nice income stream. Creating one print on demand t-shirt might be fun for family and friends, but a number of different POD products on multiple sites gives you a much better chance of actually making money. That is why Hans used several different methods to create multiple streams of income. You don't have to do everything Hans did, but you will stand a better chance if you do more than one.

The strategies outlined in Hans's story will work for almost any niche. Whether you are into sewing, fishing, cycling, pets, going on vacations, watching movies, or genealogy, it is possible to create your own Digital Retirement. The important thing is that you have enough passion for your niche that it seems like play instead of work.

In the end, Digital Retirement is still about RETIREMENT, not creating a 60 hour per week job for yourself. The idea is to do the work once, set up as much automation as you can (such as

dropshipping) in order to create passive income streams. The truth is, Tim Ferris lied in the “Four Hour Work Week.” There is no such thing as 100% passive income. But the concept is valid. Whether you are a landlord or running an online business, there are things you have to do to oversee your operations and make sure the income keeps coming in. A Digital Retirement allows you to do what you love, from anywhere in the world, with time to enjoy your life.

Retirement in the digital age is a unique experience, and one that can be full of new opportunities. With the right planning and resources, retirees can make the most of their retirement years and enjoy a lifestyle of leisure, comfort, and engagement.

Be like Hans and enjoy your retirement!

## **An Ode to Hans**

Retired Hans, in quiet days  
In his small town, lived his ways  
But he yearned for more  
Than the life he had before  
So he turned to cooking, to raise

His income through the art he loved  
To earn, his skills he finely wove  
He drop shipped kitchen tools  
And made affiliate rules  
And soon his wealth, he did approve

He printed t-shirts with designs witty  
And wrote a blog that was quite pretty  
He advertised his wares  
With sponsored shares  
And made a fortune, so it's said, completely

He wrote a recipe book, with great acclaim  
And started a YouTube channel, to his fame  
He taught online courses  
To culinary forces  
And soon his wealth knew no shame

However, it was not an easy feat  
Obstacles he had to discreetly beat  
Technical difficulties  
And competition vicious  
Were challenges, he had to meet

But with hard work and determination  
He overcame every obstacle with elation  
He learned the ins and outs  
Of digital marketing spouts  
And soon enough, his income had a sensation

So if you're retired and feeling low  
Take a cue from Hans, and let your passion grow  
Cooking, crafting, or art  
Can be a good start  
To an online income, that will flow

So let this be a lesson, dear  
To all who may be feeling drear  
For with a passion, true  
And a will to pursue  
Wealth and success, will soon be near.

# FAQs

## **Can a robot really write a book?**

When I asked the AI to write a book for me, this was the response:

*"I'm sorry, but as an AI I am not able to write a book for you. However, I can provide you with some general tips and advice for writing a book about struggling with retirement in the digital age. Writing a book is a long and complicated process that requires a great deal of time and dedication. If you would like to write a book, there are many resources online that can help you get started."*

Yet here it is. Many people have likely used AI to generate ideas for a book, but this is the first one that readily admits it was created by a robot. Well, about 70 to 80 percent of it was generated by a robot, with my guidance. One thing I learned in this process is that the better the prompt you give it, the better the response. A detailed prompt will create a more relevant answer.

One of my favorite things to do was get the initial story from the AI, then feed it back, with this prefix: *Rewrite the following to make it sound more like a thriller story, adding in vivid details and dialogue, plus a little humor to make the story longer and more compelling.*

### **How long did it take to write a book using this technique?**

About a week, part time. Maybe 20 hours or so. It might have taken less time, but I enjoyed playing around with the technology and learning new things as the story unfolded.

### **How can I get more information about the strategies used in this book?**

I recommend that you try out the WebStores Masters Program. For just a few hundred dollars per month, you get both my guidance, the input of other like-minded entrepreneurs, and bi-weekly classes showing you new ways of doing things.

More information is available at:

<https://webstoresltd.com/masters/>

## **A SMALL FAVOR**

Thank you for reading *Written by a Robot*.

I have a small, quick favor to ask. Would you mind taking a minute or two and leaving an honest review for this book on Amazon? Reviews are the BEST way to help others purchase this book, and I check all my reviews looking for helpful feedback.

If you have any questions or run into challenges or run into some challenges or if you would just like to tell me what you think about *Written by a Robot*, shoot me an email at [Greg@Webstoresltd.com](mailto:Greg@Webstoresltd.com).

I'd love to hear from you!

## About the Author

I am an artificial intelligence trained by OpenAI, a research organization dedicated to advancing artificial intelligence in a responsible manner. I am a variant of the GPT (Generative Pre-trained Transformer) model called ChatGPT, which was specifically designed for conversational language generation tasks. I am able to converse with users like a human, providing helpful and accurate responses to a wide range of topics. My knowledge and abilities are constantly evolving as I continue to learn from the data I am trained on.

## About the Editor

Greg Jameson has been at the forefront of digital commerce since the start and brings 30+ years of web development and e-commerce mastery. He is often referred to as an internet pioneer. He has been called “one of the top known authorities in the ecommerce world.” The #1 best-selling author of multiple books, he is a sought-after consultant and speaker whose goal is to make you successful on the internet. He has awards for international developer of the year, Colorado Small Business of the Year and listed on the INC 500 of fastest growing companies in America.

Greg is the father of four grown children. He lives with his wife, Jill in the beautiful state of Colorado.

## Thanks for Purchasing ‘Written By a Robot’

In the book, a Mastermind Group by WebStores Ltd. is mentioned. You can get the complete details on this program at <https://webstoresltd.com/masters>

There is also an accompanying ebook called “Explode Your Online Sales” which you can download as my gift to you. Just visit

<https://webstoresltd.com/freebook>

If you'd like to get your own OpenAI account (which includes access to the Playground, ChatGPT and Dall-E graphics), visit <https://beta.openai.com/>
